

CYBER SECURITY

SECURITY ENHANCEMENTS

At OSC, cyber security is a top priority

OSC's cyber security team is constantly researching, selecting, and implementing enhancements to security controls based on the evolving threat landscape. Implemented across the company, security controls are reviewed and improved on an ongoing basis by our veteran technology experts.

Our multi-layered security approach includes

- Steamboat maintains a SOC1 Type 2
- Steamboat maintains a SOC2 Type 2
- Firewall protection with advanced traffic analysis and alerting
- End-Point Detection and Response (EDR)
- Data is encrypted data at rest
- Data is encrypted in motion using Secure FTP (SFTP) with integrated antivirus software
- Vulnerability Management
- Protecting against Highly Evasive Adaptive Browser-Based Threats
- Multifactor authentication (2FA)
- Privileged Access Management (PAM)
- Secure Software Development Lifecycle (S-SDLC)
- Information security training
- Penetration tests performed by external experts
- Network monitored by AI-powered SIEM
